EXPERIMENT

ODD ROLL NUMBERS :

1) Explore various Flutter widgets (Text). Creating Flutter Widget Text
2)Explore various Flutter widgets (image). Creating Flutter Widget image

3) Implement different layout structures using Row widgets. Implementing Row (layout Structure) Widget
4) Implement different layout structures using Column widgets. Implementing Column (layout Structure) Widget

9) i) Write a dart program to illustrate basic data types and print function
ii) Write a dart program to read multiple variables of different data types from keyboard and print them.
iii)Write a dart program on logical operators
iv)Write a Dart program to read number from user, and find whether it is negative or positive. If positive , check whether it is even or odd.

EVEN ROLL NUMBERS :

5) Design a responsive UI that adapts to different screen sizes
6) Implement media queries and breakpoints for responsiveness.

7) Set up navigation between different screens using Navigator.
8) Implement navigation with named routes.

9) i) Write a dart program to illustrate basic data types and print function
ii) Write a dart program to read multiple variables of different data types from keyboard and print them.
iii)Write a dart program on logical operators
iv)Write a Dart program to read number from user, and find whether it is negative or positive. If positive , check whether it is even or odd.
